

# CEMENT FLOW TABLES - MANUAL AND MOTORIZED MODELS

## STANDARDS

---

ASTM C230

EN 1015-3

### **Precision Testing of Cement Consistency and Workability According to ASTM C230 and EN 1015-3**

Qualitest offers a professional range of Cement Flow Tables designed for determining the consistency and workability of cement mortar mixtures. These flow tables are essential in construction material laboratories for evaluating the flow properties of cementitious materials, ensuring compliance with international testing standards.

#### **Why Use a Cement Flow Table?**

Cement flow tables are used to measure the spread diameter of mortar specimens under controlled conditions. This test helps assess:

- Consistency and workability of fresh cement mortar
- Batch-to-batch uniformity
- Compliance with product specifications

These parameters are critical for predicting the performance and handling characteristics of mortar and render in real-world applications.

#### **Model Options**

- [Motorized Flow Table - EN 1015-3](#): Designed for precision and repeatability, with automated drop cycles that eliminate operator variability. Suitable for European and international labs using EN standards.
- [Manual Flow Table - ASTM C230](#): Built for durability and simplicity, with a hand-operated drop mechanism that meets ASTM C230 requirements for mortar consistency evaluation.

Each model is engineered for accurate, repeatable, and user-friendly testing, ideal for quality control in cement manufacturing, R&D laboratories, and construction site inspections.

### **Applications:**

- Cement and mortar testing laboratories
- Cement quality control and R&D
- Construction material testing
- Standards compliance verification

Choose Qualitest Cement Flow Tables for dependable performance, international standard compliance, and precision testing of cementitious materials. Explore our manual and motorized models to find the right solution for your testing needs.
