Portable Rockwell Hardness Tester QHR-Series - Reliable, Budget-Friendly Hardness Testing Solutions

The QHR-Series Portable Rockwell Hardness Testers are ideal for precise, on-the-go hardness testing. These lightweight, budget-friendly dial gauge models offer the same functionality and measurement accuracy as traditional laboratory bench-type testers, with the added benefit of portability. Available in four versatile categories—Portable Rockwell, Portable Superficial Rockwell, C-Clamp Type, and Chain Clamp Type—these testers meet various application needs for small parts and tools with ease and efficiency.

Applications and Standards Compliance

The QHR-Series is particularly suited for measuring the hardness of small parts such as standard hardware tools, cutter tools, and other finely machined components. Their measurement accuracy and test principles mirror those of bench-type testers, ensuring reliable results that conform to the highest standards, including ISO 6508, ASTM E110, and ASTM E18. This makes them a practical choice for applications demanding both precision and mobility.

Advantages of the QHR-Series Portable Rockwell Hardness Testers

Designed as a budget-friendly instrument, the QHR-Series testers are an excellent choice for workshops, quality control labs, and field testing. The range of options—whether a standard Portable Rockwell model, a versatile C-Clamp, or a Chain Clamp Type—ensures the right fit for virtually any testing environment.

With the **QHR-Series Portable Rockwell Hardness Testers**, users gain the reliability of a laboratory-grade device in a compact, portable form. Ideal for those in search of an affordable, high-accuracy testing solution, the QHR-Series combines quality, precision, and portability in one comprehensive package.
